Household Member Roster

Read to the respondent: Please, I would like to make a complete list of all the people present or absent who usually live and eat together in this household, including visitors who spent the previous night. I would like to have the names and ages of the head of the household, his wife(s)/her husband, and their children, as well as the number of months out of the past 12 in which each person was away from the household. [Record responses.] Please give me the names, ages, and months away of any other persons related to the head of the household or to his/her spouse, together with their children, who usually live and eat together here. [Record responses.] Please give me the names, ages, and months away of any other persons not related to the head of the household or to his/her spouse who usually live and eat together here. For instance, servants, tenants, lodgers, visitors, or any other person who is not a relative. [Record responses.] Are there any other persons not now present but who normally live and eat here, that is, persons who are temporarily away for school, marriage, seasonal work, vacation, illness, birth, etc.? What are their names, ages, and months away? [Record responses.] Count the number of household members, that is, all persons who have been away six months or less or who—regardless of time away—are the household head, under 6-months-old, was not a member of another household while away, or whose total intended stay with the household is at least six months.

Note the male head/spouse (if any). In the scorecard header, record the total number of household members next to "Number of household members:", and circle the response to the first scorecard indicator.

For each household member who is 5 to 17-years-old, ask: Is <name> currently in school? Based on the responses, circle the response for the second indicator.

Keep in mind the definition of household in "Guidelines for the Interpretation of Scorecard Indicators".
