Back-page Roster: Household Members, Ages and Work Status

For the first scorecard indicator, mark the department where the household lives.

Next, introduce yourself to the household head and say: Please tell me the first name and age of each person who lives permanently with this household, starting with yourself. A household is a person or group—regardless of blood or marital relationship—who normally live in the same residence, pool resources, share meals, and recognize the same head. To be a household member, a person must have lived with the household (or plan to live from now on) for at least six months. Someone who has been absent for more than three months no longer counts as a household member.

Write down the first name (or nickname) and the age of each member, noting for your own future use the name of the male head/spouse and of the female head/spouse. In the header under "Number of household members:", record the total number of members. Also mark the response that corresponds to the second scorecard indicator. For each member, mark whether he/she is 10-years-old or older. For each member 10-years-old or older, ask "Did <name> work for at least one hour in the past week?" Count the number of workers, and mark the third indicator.

Finally, mark the fourth indicator based on the work status of the female head/spouse.

Always keep in mind the full definitions in the "Guidelines for the Interpretation of Scorecard Indicators" for household, household member, and work.
